

App. No. 10/757,942
Attorney Docket 3016.2.7 NP

Amendments to the Specification

Replace paragraph [035] of the specification with the following:

-- [035] There is yet illustrated a removable backflow prevention device, or flow control device 26 having a backflow prevention valve 34 that prevents any backflow of the mixed solution 42 from going back into the supply lines 11a and 11b. The backflow device 26 includes a pressure chamber 46 that aids in regulating fluid pressure and allows only for the expelling of the unmixed fluid 40 into the mixing chamber 15. The backflow device 26 has a backflow valve 34 that lets fluid through only in one direction. The backflow valve 34 may be of any known design that allows fluid to flow in only one direction. --
